TASK1 (FROM CAMBRIDGE 7 TEST4)

The pie charts below show units of electricity production by fuel source in Australia and France in 1980 and 2000.

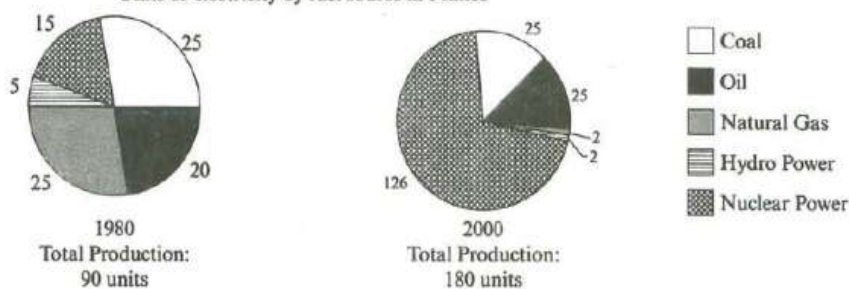

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

Units of electricity by fuel source in Australia

Units of electricity by fuel source in France

The amount of electricity which was produced by five different sources of fuel, in two nations, over two separate years, is shown ~~on~~ in the charts. It is plain to see that the total electricity increased considerably both in Australia and France over this period. [You could mention that France uses more power than Australia and that only France uses nuclear-power]. Sometimes it might be worth having two key points to your overall summary. The overall summary is THE most important part -if you can impress with this it is a good way to get to seven for task response

In more detail, in Australia, the largest amount of electricity was produced using coal, rising ~~to~~ from exactly 130 ~~of~~ to 170 units of electricity ~~in~~ from 1980 to 2000. Similarly, nuclear power became the most important fuel source in France in 2000, producing 120 of 180 unit electricity.

Comment [z1]: Passive needed

Hydro power accounted for approximately one fifth of the total energy in Australia in both years, but the figures in France dropped from 5 units in 1980 to 2 units in 2000. Similarly, around a quarter of the electricity produced using natural gas in both countries in 1980, but its use fell to 2 units in both countries in 2000. Both countries relied on oil more in 1980 than in 2000, decreasing to 2 units in both.

Grade Criteria	Estimated Grade	
Task	6	Good overall summary

response		I don't feel you covered the highlights enough, admittedly this is a difficult task because there is so much data - see below
Cohesion and coherence	6	I would structure this by country because: <ol style="list-style-type: none"> 1. you get two logical body paragraphs 2. I think you would get through the data better 3. it would be quicker to write because you wouldn't have to keep jumping around and looking at all the different categories in each of the pie charts
Vocabulary	7	There is a lot of tasks about energy note: electricity = energy, power produced= generated oil = petroleum natural gas= gas
Grammar	6-7	Lots of minor errors
overall	6-6.5	This is a difficult task. Try to structure by the fewest of countries time periods and categories. If you see there is lots of dates are then you know you have to be careful selecting it -in order to complete your report on time. Put more emphasis on your task two because it is worth double the task one - I would consider writing task two first.
