The chart below shows the amount of sales for four different kinds of foods in supermarkets in four different cities in America.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

The amount of revenue from four types of foods in four different areas in America is given in the table.

On the whole, the amount of the turnover is the highest in Boston and the lowest in San Diego (SD); also, cookies are the most popular food among the four.

It can be clearly seen that people in Boston consume a lot more cookies than those in other cities. The figure for Boston reaches 3,500m, followed by New York (NY) and Los Angeles (LC) with approximately 2,500m. By contrast, the sales of cookies are the lowest in San Diego (SD) with just under 1,500m. Identically, San Diego sees the lowest sales figures for the other three foods. In addition to that, it is interesting

**Comment [z1]:** Connect this to the previous paragraph

**Comment [z2]:** Do not do this in IELTS writing.

**Comment [z3]:** [=people]

**Comment [z4]:** you really need to show the examiner you know this word

**Comment [z5]:** it's not a good idea to keep writing these as millions. We do not say 1000 million we say 1 billion

**Comment [z6]:** these don't even look like dollars looks like 1500 metres. Don't abbreviate numbers like: thousand million billion.

to note that the turnover for bars in NY, Boston and LA are almost the same at around 2,500m. The figures for crackers and snacks show similar trends to cookies, although the scales are a lot smaller than the latter.

Grade Criteria	Estimated Grade	
Task response	5-6	<p>Good overall summary good coverage of cookies, but all the others were not really covered well, especially crackers and snacks, which you didn't have any numbers for at all.</p> <p>You need to plan your task better so that you don't say too much about one category; and so you cover all categories equally well.</p>
Cohesion and coherence	7	<p>Your overall summary should go in the introduction.</p> <p>Always look at opportunity to separate the data into paragraphs. For instance, with this task you can go by sales volume.</p> <p>Paragraph 2= highest selling items</p> <p>Paragraph 3= lowest 2 items</p>
Vocabulary	6-7	<p>I expect to see the word billion here, the task clearly calls for it.</p> <p>1,500m is not okay, it is extremely unclear and it could mean 1500 metres.</p> <p>Otherwise vocabulary was really good on this task and you might have got to 8!</p>
Grammar	8	A few minor errors only
overall	7	<p>There are some really good things about this task; like relatively few errors. However major errors with “billion” and not covering the data equally have a big negative impact on your score. It’s better to have these problems while practicing!</p>
